# piloting positive handprint warming solution

204k€ in total of which ELY funding 102k€

12.10.2023 - 31.12.2024

- 
- Build and test 5 pilots in Finland, in Oulu and Rovaniemi.
  - Verify the energy consumption and calculate energy saving potential.
  - Calculate carbon dioxide emission reduction and carbon handprint in different scenarios.
  - Human experience testing for warmth and user interfaces in pilots.

## outcomes

- 
- The project tackles the feeling of heat through human measurements and develops a completely new type of heat design model and expertise.
  - Strengthened resources in technology, product and production development in Oulu.
  - Build cooperation networks locally and globally with partners.
  - Explore export opportunities and global market potential.
